```
The present invention relates to novel human cancer-related genes and proteins (ABZ78120-ABZ79168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humorral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a substance that modulates the structure of proteins and polynucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..

The present invention relates to novel human cancer-related genes and proteins (AB279120-ABZ78168 and ABR01789-ABR01861). The genes and proteins are useful for eliciting a humonral or cellular immune response. The genes are useful as probes and primers for the amplification and/or detection of genes, mRNAs or their fragments, as reagents for the diagnosis and/or prognosis of cancer, as coding sequences capable of directing the expression of the protein, as tools for modulating or inhibiting the expression of genes and/or translation of transcripts, and as therapeutic agents. The proteins and peptides are useful as therapeutic, prognostic and diagnostic reagents for cancer. The present sequence is a human leukocyte antigen (HLA) peptide, used in an example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a substance that modulates the structure of proteins and polymucleotides, useful for therapeutic, prognostic and diagnostic reagents for eliciting cellular or humoral immune response in cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                  Ge W, Hubert RS;
                                                                                                       Human, cytostatic, vaccine, cancer; immune response, HLA; human leukocyte antigen.
                                                                      Human cancer-related protein 156P1D4 HLA peptide #356.
                                                                                                                                                                                                                                                                                                                                                                                                                Challita-Eid PM, Faris M,

                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

B44823
synaptosomal-associated protein SNAP-25 peptide 1 - rabbit (fragment)
N;Alternate names: superprotein peptide 1
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Date: 31-Mar-1993 #sequence_revision 18-Nov-1994 #text_change 15-Jun-1996
C;Accession: B44823
R;Loewy, A.; Liu, W.S.; Baitinger, C.; Willard, M.B.
J. Neurosci. 11, 3412-3421, 1991
A;Tille: The major 355-methionine-labeled rapidly transported protein (superprotein) is A;Reference number: A44823; MUID:92044785; PMID:1941090
A;Reterns preliminary
A;Molecule type: protein
A;Residues: 1-4 < LOE>
A;Experimental source: visual tissue
A;Note: sequence extracted from NCBI backbone (NCBIP:64247)
C;Keywords: membrane trafficking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"The expansion behaviour of sea anemones may be coordinated by two
inhibitory neuropeptides, Antho-Kamide and Antho-Riamide.";
Proc. R. Soc. Lond., B, Biol. Sci. 253:183-188(1993).
-!-FUNCTION: Inhibits spontaneous contractions in several muscle
groups. May be involved in the expansion phase of feeding
behaviour in sea anemones.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Neuron specific.

Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.

Claim 5; Col 13; 11pp; English.

This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kDa anti-haemozrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Blapidae, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of bee or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and traing conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthitis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, dations or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                     ö
snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to methods to determine the etiological agent of autoimmune diseases such as systemic lupus erythematosus (SLB). A common antigen for SLB and closely related disorders is the 60 kD protein-RNA particle: Ro/SSA, present in all cells studied to date. Staphylococcus VB protease digestion of this protein reveals bands of 51, 40, 35, 28 and 13 kD which are strongy immunoreactive with SLB autoantibodies. From the 13 kD band, peptide AAW24911 demonstrated maximal antigenicity against anti-Ro/SSA autoantibodies peptides immunoreactive with SLB autoantibodies can then be used to screen for other peptides reactive with the antibodies. An example of such a peptide is the sequence presented here which is derived from the nucleocapsid protein of the Indiana serotype of the vesicular stomatitis virus. The invention relates to increasing or reducing cell apoptosis. The method involves providing at least 1 cell or a tissue, and a polypeptide having 1 or more defined tetrapeptide sequences selected from ARR8293-28 and administering the polypeptide to the cell so that apoptosis of the cell or tissues is increased or reduced. The polypeptide is selected from a human, mouse or a rat CCAAT/enhancer binding protein (C/Babbeta). The cell or tissues is increased or reduced. The polypeptide is selected from the compositions are useful for diagnoshing (C/Babbeta). The certing cancer, fibrosis or cell apoptosis in a tissue. The fibrosis is confered with rejection, alcoholism, toxic liver disease, genetic hepaticis binfection, alcoholism, toxic liver disease, genetic converted with a liver cirrhosis. The cell apoptosis is a secciated with a liver disease from rejection of liver converting converting associated with a liver disease from rejection of liver converting converting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disease, hepatic disease, brain damage, neurological trauma, neurodegeneration, myocardial infarction, arteriosclerosis, fibrotic skin conditions and fibrotic pulmonary disease. The present sequence represents a tetrapeptide obtained from exemplary mouse and human c/EBPbeta polypeptide

This invention describes novel peptides (1) of the defensin type which have antibacterial, antiinfertility and contraceptive activity and which can be used for peptide therapy. (1), and their derivatives and can be used for peptide therapy. (1), and their derivatives and cassociated will respiratory or urogenital tracts, or of the skin and associated algands; (11) to treat systemic diseases associated with overexpression or deficiency of defensin production, particularly as ubstitution therapy or by using (1)-specific antibodies; (ii) to treat infertility, sepecially where the result of disordered sperm penetration, infartion or maturation, also as contraceptives; and (iv) as a diagnostic marker of inflammatory disease in epithelial organs. Both chronic and coute diseases may be treated, e.g. in intensive care. Also genes that canced (1) can be used for systemic or localised gene therapy of the specified diseases, in epithelial tissues or organs. (1) have exceptional conventional describty well suited for long-term use. This sequence represents a human defensin described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New defensin type peptides useful for treatment of bacterial infections and for fertility control, and as a diagnostic marker of inflammatory disease in epithelial organs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                          Defensin; human; antibacterial; antiinfertility; contraceptive; peptide therapy; infection; gastrointestinal; respiratory tract; urogenital tract; skin; gland; sperm penetration; systemic disease; infertility; sperm inidation; sperm maturation; diagnostic marker; inflammatory disease; epithelial organ; gene therapy.

The invention relates to peptides (AAMS1251-AAMS1381) with a higher affinity to gp120, part of the outer shell of HIV, than known peptides. CC affinity to gp120, shown by formula (H-) H-)A2-A3-A4-A5-R. C(1), A1-A2-A3-A4-A5-R. (2) or H-A1-A2-A3-A4-A5-R. (3), (H-) a1-a2-a3-a4-5-R. (2), A1-A2-A3-A4-A5-R. (2), A1-A2-A3-A4-A5-R. (3), (H-) a1-a2-a3-a4-A5-R. (2), A1-A1, G1V, A81 or Tyr residue; A2 = Va1, A8p, Trp, L9s, Phe, CC L9s, Va1, G1V, G1Y, A81 or Tyr residue; A3 = L9s, Va1, A8p, Arg, Phe, Trp, Pro or Tyr residue; R = OH derived CC Asn, G1N, His, Lys, Arg, Phe, Trp, Pro or Tyr residue; R = OH derived CC Asn, G1N, His, Lys, Arg, Phe, Trp, Pro or Tyr residue, R = OH derived C Lys, Va1, G1V, G1V, A8n or Tyr residue, or a polypeptide residue having optional amino acids at N-terminal; A5' = G1Y, A1, G1V, A1, L9, L1C, Trp, Pro or Tyr residue, or a polypeptide residue having optional amino acids at C-terminal; a1 = Tyr, CC Thr, Met, Asn, G1N, His, Dys, Arg, Phe, Trp, Pro or Tyr residue; a2 = Arg Tyr, Try, Trp, Has or Arg, Phe, G1Y, Trp, His or Arg, Phe, G1Y, Trp, His or Arg, Phe, G1Y, Trp, His or Arg, Phe, Tyr, Arg, G1N, His, Lys, Arg, Phe, G1Y, A1, Va1, Leu, His, Ser, Thr, Met, Asn, G1N, His, CL, Ser, Thr, Met, Asn, G1N, His, CC Try residue, or a polypeptide residue having optional amino acids at C-terminal; and a5' = G1Y, A1a, Va1, Leu, His, Ser, Thr, Met, Asn, G1N, His, CC Terminal; and a5' = G1Y, A1a, Va1, Leu, His, Ser, Thr, Met, Asn, G1N, CH, Leu, His, Lys, Arg, Phe, Tyr or Try, or Try, or Olypeptide residue having optional amino acids at C-terminal; and a5' = G1Y, A1a, Va1, Leu, His, Ser, Thr, Met, Asn, G1N, CH, Leu, His, Lys, Arg, Phe, And, Phe, Tyr or Try, or Try, or Try, or Dolypeptide residue having optional amino acids at C-terminal. The peptides are useful in the treatment of HIV and in the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; protein degradation; siah-mediated degradation protein; SMDP; SFC-complex protein; SCP; siah-latlpha; siah-latine protein; SCP; Skpl-associated F-box protein; SAF-1; SAF-2; SAD; cancer; cell division; Skpl-associated destruction-box protein; inflammatory disease.
                                                                                                                                                                                                             Novel peptides with affinity to gp 120, useful for treatment of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score 15; DB 4; Length 5; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequences encoding SDD1, a subtilisin-like serine protease, can be used to produce transgenic plants with altered stomata characterisitics. These plants exhibit improved freshness, increased dry weight, reduced leaf temperatures, reduced water loss and lower water consumption and for enhancing the sugar and/or protein content of plant leaves, modulating photosynthesis under high intensity conditions or for the improvement of disease resistance of plants. The transgenic plants and cells of such plants are useful in the preparation of feed, food or additives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant DNA molecules encoding subtilisin-like serine protease, useful for producing transgenic plants with altered stomata, lower water consumption and enhanced diseased resistance.

                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                           The present invention provides the protein and coding sequences of several siah-mediated degradation proteins and SCF-complex proteins. These are designated Siah-Lalpha, Siah-1 interacting protein (SIP), which encodes two proteins clark to alternative splicing (SIP-L and SIP-S), Skplassociated F-box protein-lalpha and beta and -2 (SAF-Lalpha, SAF-lbeta and SAF-2) and Skpl-associated destruction-box protein (SAD). The proteins and their coding sequences are useful in the diagnosis and treatment of cancers, disorders where too little cell division occurs such as bone marrow aplassas, immunodeficiencies and inflammatory diseases including sepsis, fibrosis, arthritis and graft versus host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptides having growth inhibitory action, useful for inhibiting tumor or cancer cell proliferation, or for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (angiogenic)
                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to an isolated peptide or polypeptide (I) of no more than about 50 amino acid residues which when contexted with cells in which a platelet-derived growth factor receptor (PDGF-R) is activated in an autocrine manner, inhibits the growth of these cells. The isolated peptides or polypeptides preferably have the sequences: Lys-Lys-Lys-Lys-Lys (P1) Asp-Asp-Glu-Glu-Glu-Glu-Glu-Glu-March-Ser-Tyr. (P3) Phe-Phe-Phe-Pro-Val (P5). Lys-Lys (P4) Phe-Phe-Phe-Phe-Phe-Cell is a tumor or cancer cell (e.g. carcinoma, sarcoma, osteosarcoma, glioma, melanoma, myxoma, adenoma, neuroblastoma, or rhabdomyoma-derived cell), lung, breast, colon, prostate, kidney, ovary, testicular, skin, pancreatic, thyroid, adrenal, pituitary, brain, muscle or bone cell. The peptides are also useful for treating fibrotic disorders. myeloproliferative diseases, and blood vessel proliferative (angiogenic) disorders. This sequence represents a shuffled P3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New peptides having growth inhibitory action, useful for inhibiting tumor or cancer cell proliferation, or for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (angiogenic) disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated peptide or polypeptide (I) of no more than about 50 amino acid residues which when contacted with cells in which a platelet-derived growth factor receptor (PDGF-R) is activated in an autocrine manner, inhibits the growth of these cells. Lys-Lys (P4) Phe-Phe-His-Pro-val (P5) . (1) is useful for inhibiting cell proliferation, where the cell is a tumor or cancer cell (e.g. carcinoma, sarcoma, osteosarcoma, glioma, melanoma, myxoma, adenoma, neuroblastoma, or rhabdomyoma-derived cell), lung, breast, colon, prostate, kidney, ovary, testicular, skin, pancreatic, thyroid, adrenal, pituitary, brain, muscle or bone cell. The peptides are also useful for treating fibrotic disorders, myeloproliferative diseases, and blood vessel proliferative (angiogenic) disorders. This sequence represents a shuffled P3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide useful for selecting antigen for antigen binding variable domain that binds to target antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a target. The phage library is useful for selecting a polypeptide that binds to a target target antigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                       polypeptide useful for selecting antigen for antigen binding variable
                                                                                                                                                                                                                              The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a traget. The phage library is useful for selecting a polypeptide that binds to a target antigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 variant; CDRH3; CDR; complementarity determining region; antibody;

This invention relates to a novel polypeptide comprising a variant complementarity determining region of heavy chain 3 (CDRH3) region complementarity determining region of heavy chain 3 (CDRH3) region comprising at least one structural amino acid position, and at least one structural position having a variant amino acid. The invention is constructural position having a variant amino acid. The invention is cast cast density as aconte for identifying novel antigen binding polypeptides are useful as source for identifying novel antigen binding polypeptides and antibody cast can be used therapeutically or as reagents. A synthetic antibody phage library of these polypeptides is useful for screening synthetic antibody or antigen binding polypeptide with a streening synthetic antibody or antigen binding polypeptide with the library is also useful as resource for identifying immunoglobulin polypeptide sequences that are capable of interacting with any of a wide variety of target molecules. The invention provides high throughput, efficient and automatable systems for screening antigen binding molecules of interest. The present sequence is that of a peptide which is related to the novel polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cysteine contg. peptide derivs. which inhibit platelet integrin - are useful for treating or preventing circulatory disease, thrombosis, etc., also for affinity purification. of integrins.
                                 New polypeptide comprising variant complementarity determining region of heavy chain 3 having structural amino acid positions, and non-structural positions having variant amino acid, useful for identifying antigen binding polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  platelet integrin; gp IIb/IIIa; thrombosis; infarction; inflammation; coronary heart disease; arteriosclerosis; atherosclerosis; stroke; angina pectoris; tumour; osteoporosis; angiogenesis; restenosis; awound healing; ligand; integrin; affinity chromatography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diefenbach B, Rippmann F;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                    New polypeptide useful for selecting antigen for antigen binding variable domain that binds to target antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complementarity determining region; heavy chain 3; CDRH3; CDRH3 scaffold; synthetic antibody phage library; binding affinity; structural stability;
                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel polypeptide comprising a variant CDRH3 antibody variable domain. The invention further provides an antibody phage library. The variant CDRH3 polypeptide is useful for selecting an antigen for an antigen binding variable domain that binds to a target. The phage library is useful for selecting a polypeptide that binds to a target antigen from the library of polypeptides and isolating high affinity binders to a target antigen from the library of polypeptides and isolating high expression vectors. This sequence represents a variable antibody domain related polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic phage antibody library-related 4D5 antibody peptide SeqID4.

```

The invention relates to new linear peptides of formula X-A-Cys(R1)-B-Z in which X is H or Ac; A is absent or is Asp or a specified polypeptide; B is absent or a specified amino acid or polypeptide; A and B cannot both be absent; and Z is OH or an ester or amide group. The peptides inhibit binding of the platelet integrin gpIIb/IIIa to its natural ligands and so are useful for preventing circulatory diseases, thrombosis, cardiac infarction, inflammation, coronary heart disease, arteriosclerosis, atherosclerosis, stroke, angina pectoris, tumour, osteoporosis, angiogenesis and restenosis. They are also useful for promoting healing of wounds and as ligands for purification of integrins by affinity chromatography. The present sequence is a specific example of the *888888888888888888

Sequence 4 AA;

APPLICANT: John C. Reed
APPLICANT: Shu-ichi Matsuzawa
TITLE OF INVENTION: Nucleic Acid Encoding Proteins Involved
TITLE OF INVENTION: In Protein Degradation, Products and Methods Related Thereto
FILE REFERENCE: P-LJ 4220
CURRENT APPLICATION NUMBER: US/09/591,694
CURRENT PILING DATE: 200-06-09
EARLIER PILING DATE: 1999-06-11
NUMBER OF SEQ ID NOS: 49
SEQ ID NO 39
LENGTH: 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4, Application US/08329820

Patent No. 5747457

GENERAL INFORMATION:

APPLICANT: FELDING-HABERMANN, BRUNHILDE

APPLICANT: PELDING-HABERMANN, BRUNHILDE

APPLICANT: DIEFENBACH, BEATE

APPLICANT: RIPPARNN, FELDERICH

ITILE OF INVENTION: Linear Adhesion Inhibitors

NUMBER OF SEQUENCES: 228

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: ISM PC Compatible

OPERATING STERMEN: PC Compatible

OPERATING STERMEN: DE 4000 Wersion #1.30 (BPO)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                                                                                                                                                                                                                Sequence 88, Application US/08329820
; Sequence 88, Application US/08329820
; Patent No. 5747457
; GENERAL INFORMATION:
APPLICANT: FILDING-HABERMANN, BRUNHILDE
APPLICANT: RIPPMANN, FRIEDRICH
TITLE OF INVENTION: Linear Adhesion Inhibitors
NUMBER OF SEQUENCES: 228
COMPUTER: RIPPMANN, FRIEDRICH
TITLE OF INVENTION: Linear Adhesion Inhibitors
NUMBER OF SEQUENCES: 228
COMPUTER: INPR PC compatible
COMPUTER: INPR PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30 (BPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/329,820
FILING DATE: 27-OCT-1994

Sequence 17, Application US/09016750C

Patent No. 6486131

GENERAL INFORMATION:

APPLICANT: Beach, David H.

APPLICANT: Demetrick, Douglas J.

APPLICANT: Hannon, Manuel

APPLICANT: Hannon, Gregory J.

TITLE OF INVENTION: CELL-CYCLE REGULATORY PROTEINS, AND USES

TITLE OF SEQUENCES: 17

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4.1e+05;

R;Montecucchi, Protein Res. 33, 391-395, 1989
A;Title: Isolation, structure determination and synthesis of a novel tryptophan-containi A;Reference number: A61081
A;Accession: A61081

A Molecule type: protein
A, Residues: 1-7 < AMON.
A, Residues: 1-7 < AMON.
C, Comment: The biological activity of this peptide was not determined.
C, Superfamily: unassigned animal peptides
C, Seywords: amidated carboxyl end; hydroxyproline; skin
F;3/Modified site: 4-hydroxyproline (Pro) #status experimental
F;7/Modified site: amidated carboxyl end (Pro) #status experimental
